THE BEST VALUE IN RADIO CONTROL TODAY.

How Does It Work?

This helium-filled airship gives you the freedom of weightless flight. You will enjoy piloting this micro-blimp with fingertip control of climbs, turns, and dives by radio control up to 200 feet away! The Tri-Turbofan electric micromotor powered propellers are positioned so that you can independently control your flight path vertically and horizontally. All you need to fly is an inexpensive helium tank and batteries available from most "Mart" stores. You can also get quick "fill" of helium gas from a local flower shop, party store, or anywhere helium balloons are sold.

The Tri-Turbofan gondola is attached to the balloon with cellophane tape. Some Extra weight is added for "Ballast" so that neutral buoyancy is achieved - The airship neither rises nor falls, it simply hovers on its own in mid air!

The Tri-Turbofans' three micromotor powered propellers are independently controlled by a handheld radio control transmitter. Modulation of the transmitter controls allows independent control of the speed and direction of the propeller thrust in the vertical and horizontal planes resulting in Full Aerial Maneuverability!

The Tri-Turbofan Flying Saucer has excellent flying characteristics and is easy to learn yet challenging to master. Its symmetrical design makes it highly maneuverable and its small size is ideal for flying through doorways or up a staircase.

The Tri-Turbofan Blimp is ideal for indoor advertising at trade shows, and it has enough lift to carry the PTV16 wireless video camera. Plantraco's PTV16 weighs in at a featherweight 16 grams, and broadcasts to any TV set tuned to UHF channel 16. Now anyone can own their own "Blimp Cam" for aerial views of basketball games and crowds of people!

Top Speed for the blimp or saucer configuration is approximately 5 MPH, a fast walking pace.
